

Searching for your
metal pipe?

Be sure.

POINT
guard

POINT guard

the tool that
gives you
confidence.

Before any excavation begins, it's critical to accurately locate and identify pipelines and utilities. But how often have you found yourself wondering — *is that actually metal pipe, or did I hit something else—like a big rock?* Sure, you have a variety of tools, such as construction maps, drawings, and alignment sheets, as well as the age-old probe rod at your disposal. But how can you be even more confident that you've accurately located metallic pipe? And what about the possible damage your probe rod can leave on the pipe coating, or even the pipe itself?

Now, with *Point Guard* and its patented sensor technology, pipeline operators and maintenance crews have an additional tool to help identify metal pipe—all while providing confidence that any damage to the

pipe will be greatly mitigated. Plus, with *Point Guard*, you can greatly decrease the time it takes to find your metallic pipe—allowing you to get to work on the project even faster. After all, your time is money.

Here's how it works

At the site of anticipated excavation, begin by using a standard 1/2" probe rod. At the very first indication of an object, remove the probe rod and insert *Point Guard*.

Once the sensor technology comes in close proximity with any metal, *Point Guard's* indicator light will immediately light-up—giving you that extra reassurance you've accurately located your buried metallic pipe. The *Point Guard* sensor will detect metal pipe through various coatings

including wax, enamel and epoxy coatings. An additional feature is depth of cover markings engraved on the standard 6' *Point Guard*, making measuring depth of cover simple.

Additionally, *Point Guard* is water resistant and works using two standard 9-volt batteries. And, its battery health detector ensures that you are always up and running.

Get yours today

Point Guard, a product of Point Integrity Solutions, gives pipeline operators and distributors a new tool to aid in identifying cast iron and metallic pipe.

Included with every *Point Guard* package, you'll receive the patented *Point Guard* metal pipe detector with its sensor technology and two replacement sensor protector tips.

Get added reassurance with *Point Guard*™

There's no reason to begin any excavation without the tool that gives you added confidence and makes your job easier and faster. Call Point Integrity Solutions to order your *Point Guard* today.
